**DO NOT OPEN THIS BOOKLET UNTIL YOU ARE TOLD TO DO SO.**

**ADDITIONAL MATERIALS**

In addition to this paper, you will need a calculator.

**INSTRUCTIONS TO CANDIDATES**

Use black ink or black ball-point pen.

Do not use pencil or gel pen.

Do not use correction fluid.

Write your name, centre number and candidate number in the spaces at the top of this page.

Answer **all** the questions in the spaces provided. You may use continuation paper on page 13 if necessary, taking care to number the continuation correctly.

**INFORMATION FOR CANDIDATES**

Mark allocations are shown in brackets. This paper has a total of 50 marks.

M A Y 1 4 1 1 3 1 0 1 0 1

Answer all the questions in the spaces provided.

1. Study the data in Figures 1 and 2 below.

Figure 1.

Figure 2. Gross domestic capital formation (% of GDP) for China

Gross domestic capital formation is a measure of investment in capital goods in an economy.

Examiner only

(a) Mark on the production possibility curve diagram in figure 1 China's production pattern in 2011. [1]

(b) Explain why the data shown in figure 2 might lead to higher economic growth in China. [4]

**4. WATER COMPANIES' PRICES CONTROLLED BY REGULATOR**

Ofwat, the water industry regulator, has set limits on how much the price of water bills to households can rise over the next few years. Households in the UK have no choice of water provider as firms such as Welsh Water are monopolies in their own regions.

How might uncontrolled market power of such monopolies result in market failure? [3]

5.

**ETS carbon price**  
€ per tonne

The **price of carbon** fell below €5 a tonne for the first time on the European Union's Emissions Trading System. A glut of pollution permits has caused carbon prices to fall by 70% since 2011, providing little incentive for companies to cut emissions rather than pay for the permits. Officials want to withdraw some of the permits in the hope that the price will rise.

Source: *Economist* 26/1/13

(a) Using a diagram explain why a reduction in the number of pollution permits would raise their price. [4]

6. Air passenger duty (APD) was introduced in 1994 as part of the government's policy to reduce carbon emissions. By increasing the price of tickets for air travellers it was hoped that fewer people would travel by air. However by 2013, with APD at £13, a report found that to avoid paying the tax many travellers took connecting flights via European airports such as Amsterdam to avoid paying the tax in the UK. This practice has apparently increased emissions from extra journeys. The same report found that by abolishing the tax altogether 60,000 jobs would be created, GDP would rise by 0.46% and the government's tax revenue would actually rise!

Using the data explain the meaning of the term government failure.

**8. JOBCENTRE REPORTS 2,000 JOBS ON OFFER IN HULL, BUT NO TAKERS**

Jobseekers and employers are being urged to be less choosy as new figures show more than 2,000 vacancies are going unfilled in Hull.

The city has some of the highest rates of unemployment in the country, with 8.3 per cent of the population claiming jobseeker’s allowance, more than double the national average of 3.8 per cent.
