## Final

Mark Scheme

Mark schemes are prepared by the Principal Examiner and considered，together with the relevant questions，by a panel of subject teachers．This mark scheme includes any amendments made at the standardisation events which all examiners participate in and is the scheme which was used by them in this examination．The standardisation process ensures that the mark scheme covers the candidates＇responses to questions and that every examiner understands and applies it in the same correct way．As preparation for standardisation each examiner analyses a number of candidates＇ scripts：alternative answers not already covered by the mark scheme are discussed and legislated for． If，after the standardisation process，examiners encounter unusual answers which have not been raised they are required to refer these to the Principal Examiner．

It must be stressed that a mark scheme is a working document，in many cases further developed and expanded on the basis of candidates＇reactions to a particular paper．Assumptions about future mark schemes on the basis of one year＇s document should be avoided；whilst the guiding principles of assessment remain constant，details will change，depending on the content of a particular examination paper．
