Mathematics

MM1B

Unit Mechanics 1B

Friday 12 June 2015 9.00 am to 10.30 am

For this paper you must have:

- the blue AQA booklet of formulae and statistical tables.

You may use a graphics calculator.

Time allowed

- 1 hour 30 minutes

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- Write the question part reference (eg (a), (b)(i) etc) in the left-hand margin.
- You must answer each question in the space provided for that question. If you require extra space, use an AQA supplementary answer book; do **not** use the space provided for a different question.
- Do not write outside the box around each page.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.
- The **final** answer to questions requiring the use of calculators should be given to three significant figures, unless stated otherwise.
- Take $g = 9.8 \text{ m s}^{-2}$, unless stated otherwise.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 75.

Advice

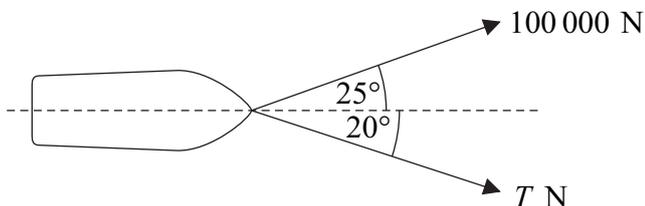

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

3 A ship has a mass of 500 tonnes. Two tugs are used to pull the ship using cables that are horizontal. One tug exerts a force of 100 000 N at an angle of 25° to the centre line of the ship. The other tug exerts a force of T N at an angle of 20° to the centre line of the ship. The diagram shows the ship and forces as viewed from above.

The ship accelerates in a straight line along its centre line.

(a) Find T . **[3 marks]**

(b) A resistance force of magnitude 20 000 N directly opposes the motion of the ship. Find the acceleration of the ship. **[4 marks]**

REFERENCE

Answer space for question 3

QUESTION
PART
REFERENCE

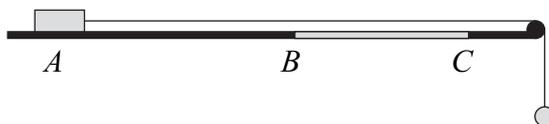

Answer space for question 3

A large rectangular area with horizontal dotted lines for writing the answer to question 3.

Turn over ►

- 5** A block, of mass $3m$, is placed on a horizontal surface at a point A . A light inextensible string is attached to the block and passes over a smooth peg. The string is horizontal between the block and the peg. A particle, of mass $2m$, is attached to the other end of the string. The block is released from rest with the string taut and the string between the peg and the particle vertical, as shown in the diagram.

Assume that there is no air resistance acting on either the block or the particle, and that the size of the block is negligible.

The horizontal surface is smooth between the points A and B , but rough between the points B and C . Between B and C , the coefficient of friction between the block and the surface is 0.8 .

- (a) By forming equations of motion for both the block and the particle, find the acceleration of the block between A and B . **[4 marks]**
- (b) Given that the distance between the points A and B is 1.2 metres, find the speed of the block when it reaches B . **[3 marks]**
- (c) By forming equations of motion for both the block and the particle, find the acceleration of the block between B and C . **[5 marks]**
- (d) Given that the distance between the points B and C is 0.9 metres, find the speed of the block when it reaches C . **[3 marks]**
- (e) Explain why it is important to assume that the size of the block is negligible. **[1 mark]**
