Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information, please visit our website at www.edexcel.com.

Our website subject pages hold useful resources, support material and live feeds from our subject advisors giving you access to a portal of information. If you have any subject specific questions about this specification that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.
- Mark schemes will indicate within the table where, and which strands of QWC, are being assessed. The strands are as follows:
 - i) ensure that text is legible and that spelling, punctuation and grammar are accurate so that meaning is clear
 - ii) select and use a form and style of writing appropriate to purpose and to complex subject matter
 - iii) organise information clearly and coherently, using specialist vocabulary when appropriate

21(a)(vi)	Colourless / pale yellow to (pale) pink / first permanent pink	Purple Just '(pale) pink'	1

Question Number	Acceptable Answer	Reject	Mark
21(a)(vii)	(More manganate(VII) is needed to oxidize Fe^{2+} , so) titre will be larger (1) Stand alone mark Because the Mn oxidation number changes from 7 to 4 (rather than 2) OR Mn accepts fewer electrons per mole (1) (Brown precipitate is) manganese(IV) oxide / MnO_2 ALLOW $\text{Mn}(\text{OH})_4$ (1) IGNORE References to inaccurate / inconsistent titre values	$\text{Mn}(\text{OH})_2$	3

Question Number	Acceptable Answer	Reject	Mark
21(b)(i)	Anodic area: $\text{Fe}^{2+} + 2\text{e}^{-} \rightleftharpoons \text{Fe}$ ($E^{\ominus} = -0.44 \text{ V}$) OR $\text{Fe} \rightleftharpoons \text{Fe}^{2+} + 2\text{e}^{-}$ (1) Cathodic area: $\text{O}_2 + 2\text{H}_2\text{O} + 4\text{e}^{-} \rightleftharpoons 4\text{OH}^{-}$ ($E^{\ominus} = +0.40 \text{ V}$) (1) ALLOW $\frac{1}{2}\text{O}_2 + 2\text{H}^{+} + 2\text{e}^{-} \rightleftharpoons \text{H}_2\text{O}$ ($E^{\ominus} = +1.23 \text{ V}$) Penalise omission of electrons or use of cell diagrams once only Anode and cathode reversed max 1. IGNORE State symbols even if incorrect Single arrow in equations		2

Question Number	Acceptable Answer	Reject	Mark
21(b)(ii)	$E^\ominus_{\text{cell}} = (+)0.40 - (-0.44) = (+)0.84 \text{ (V)}$ ALLOW $E^\ominus_{\text{cell}} = (+)1.23 - (-0.44) = (+)1.67 \text{ (V)}$ Correct answer with no working scores 1		1

Question Number	Acceptable Answer	Reject	Mark
21(b)(iii)	Dissolved salt makes the water a better conductor (of ions) OR The solution acts like a salt bridge OR Makes it an (effective) electrolyte OR Improves the flow of ions through the solution ALLOW Improves the flow of electrons through the metal	Improves the flow of ions through the metal Improves the flow of electrons through the solution	1

Question Number	Acceptable Answer	Reject	Mark
21(b)(iv)	Magnesium has a more negative E^\ominus (allow more reactive) and so reduces the Fe^{2+} OR suppresses the oxidation of iron OR forces the iron (in the absence of oxygen) to act as the cathode ALLOW Mg corrodes / oxidizes in preference to / faster than (the Fe / steel) OR Magnesium acts as a sacrificial anode	Just 'sacrificial protection'	1
