CHEMISTRY 9701/31

Advanced Practical Skills 1

October/November 2011

2 hours

Candidates answer on the Question Paper.

Additional Materials: As listed in the Confidential Instructions

### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Give details of the practical session and laboratory where appropriate, in the boxes provided.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

You may lose marks if you do not show your working or if you do not use appropriate units.

Use of a Data Booklet is unnecessary.

Qualitative Analysis Notes are printed on pages 8 and 9.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [ ] at the end of each question or part question.

2

1 You are to determine the enthalpy change of neutralisation of hydrochloric acid by aqueous sodium hydroxide and also the concentration of the aqueous sodium hydroxide. These can be found by measuring the temperature change when solutions of the acid and alkali are mixed.

For Examiner's Use

**FA 1** is aqueous sodium hydroxide, NaOH. **FA 2** is 2.00 mol dm<sup>-3</sup> hydrochloric acid, HC*l*.

### (a) Method

- Fill a burette with FA 1. [Care: FA 1 is corrosive]
- Support the plastic cup in a 250 cm<sup>3</sup> beaker.
- Use a measuring cylinder to transfer 25 cm<sup>3</sup> of **FA 2** into a 100 cm<sup>3</sup> beaker.
- Use a measuring cylinder to add 35 cm<sup>3</sup> of distilled water to the acid in the beaker.
- Measure and record, in the table below, the initial temperature of the mixture in the beaker.
- Run 5.0 cm<sup>3</sup> of **FA 1** from the burette into the plastic cup.
- Add the mixture of acid and water from the 100 cm<sup>3</sup> beaker to the FA 1 in the plastic cup.
- Stir carefully and measure the highest temperature obtained.
- Record this temperature in the table.
- Rinse the plastic cup with water.
- Repeat the experiment using 25 cm<sup>3</sup> of **FA 2**, 30 cm<sup>3</sup> of distilled water and 10.0 cm<sup>3</sup> of **FA 1** as shown for experiment **2** in the table.
- Carry out experiments 3 to 7 in the same way.
- Complete the table for each experiment.

#### Results

| experiment number                        | 1   | 2    | 3    | 4    | 5    | 6    | 7    |
|--|-----|------|------|------|------|------|------|
| volume of <b>FA 2</b> / cm <sup>3</sup>  | 25  | 25   | 25   | 25   | 25   | 25   | 25   |
| volume of water / cm <sup>3</sup>        | 35  | 30   | 25   | 20   | 15   | 10   | 5    |

| (c) | Reading from the intersection of the two lines on your graph,  | For               |
|-----|--|-------------------|
|     | the volume of <b>FA 1</b> iscm <sup>3</sup> ,  | Examiner's<br>Use |
|     | the temperature change is °C. [1]  |                   |
|     | The volume of FA 1 at the intersection represents the volume of FA 1 which neutralised $25.0\mathrm{cm^3}$ of FA 2.                                |                   |
| (d) | The reaction between FA 1 and FA 2 is shown in the equation below.   |                   |
|     | $NaOH(aq) + HCl(aq) \rightarrow NaCl(aq) + H_2O(l)$  |                   |
|     | This reaction is exothermic.   |                   |
|     | Use this information to explain the shape of the graph.  |                   |
|     |  |                   |
|     |  |                   |
|     | [2]  |                   |
| (e) | Calculate the amount of heat energy produced in the reaction. Use the temperature change from <b>(c)</b> in calculating your answer.               |                   |
|     | [Assume that 4.3J are required to raise the temperature of $1\mbox{cm}^3$ of any solution by $1\mbox{^\circ}\mbox{C}]$                             |                   |
|     | heat energy produced = J [2]   |                   |
| (f) | Calculate how many moles of hydrochloric acid are present in 25 cm <sup>3</sup> of <b>FA 2</b> .   |                   |
|     | mol of hydrochloric acid = [1]   |                   |
| (g) | Use your answers to <b>(e)</b> and <b>(f)</b> to calculate the enthalpy change of neutralisation of hydrochloric acid by aqueous sodium hydroxide. |                   |
|     | Give your answer in kJ mol <sup>-1</sup> and include the relevant sign.  |                   |
|     |  |                   |
|     |  |                   |
|     | enthalpy change of neutralisation = kJ mol <sup>-1</sup> sign value [2]  |                   |

| (h) | Explain why the <b>total</b> volume of solution used was kept constant in each of the experiments.   | For<br>Examiner's<br>Use |
|-----|--|--------------------------|
|     |  |                          |
|     | [1]  |                          |
| (i) | Calculate the concentration, in mol dm <sup>-3</sup> , of the aqueous sodium hydroxide, <b>FA 1</b> .  |                          |
|     | concentration of <b>FA 1</b> = $moldm^{-3}$ [2]  |                          |
| (j) | A student thought that the experiment was not accurate because the temperature changes measured were small.  |                          |
|     | Suggest a modification to the experimental method used in order to give larger changes in temperature.   |                          |
|     |  |                          |
|     | [1]  |                          |
| (k) | Experiments <b>1</b> to <b>7</b> were repeated using $1.00\mathrm{moldm^{-3}}$ sulfuric acid, $\mathrm{H_2SO_4}$ , instead of the $2.00\mathrm{moldm^{-3}}$ hydrochloric acid, $\mathrm{HC}\mathit{l}$ . |                          |
|     | On the axes below indicate an appropriate temperature scale and sketch the graph for the temperature changes you would expect.   |                          |
|     | temperature change/°C  |                          |

#### 2 Qualitative Analysis

At each stage of any test you are to record details of the following.

For Examiner's Use

- colour changes seen
- the formation of any precipitate
- the solubility of such precipitates in an excess of the reagent added

Where gases are released they should be identified by a test, **described in the appropriate place in your observations**.

You should indicate clearly at what stage in a test a change occurs. Marks are **not** given for chemical equations.

No additional tests for ions present should be attempted.

If any solution is warmed, a boiling tube MUST be used.

Rinse and reuse test-tubes and boiling tubes where possible.

Where reagents are selected for use in a test, the full name or correct formula of the reagents must be given.

- (a) You are provided with three sodium salts **FA 3**, **FA 4** and **FA 5**. Each salt contains **one** of the ions carbonate,  $CO_3^{2-}$ , sulfite,  $SO_3^{2-}$  or sulfate,  $SO_4^{2-}$ .
  - (i) Using your knowledge of the reactions of these ions, suggest **one** reagent you could add to the solid to find out which ion is present in each of the solids.

(ii) Use the reagent you selected in (i) to identify which of these ions is present in FA 3, FA 4 and FA 5.

Carry out suitable tests on a small amount of each solid and record the results of your experiments in an appropriate form in the space below.

I II III IV V VI

Identify the anions in FA 3, FA 4 and FA 5.

FA 3 contains the .....ion.

FA 4 contains the .....ion.

**FA 5** contains the .....ion.

[6]

**(b) (i)** You are provided with **FA 6** both as a solid and in aqueous solution. Complete the following table.

For Examiner's Use

| test   | observations                              |    |
|--|---|----|
| To a small spatula measure of <b>FA 4</b> in a test-tube, add enough distilled water to make a solution. |   |    |
| Add 1 cm depth of <b>FA 6</b> solution.  |   |    |
| To a small spatula measure of <b>FA 5</b> in a test-tube, add enough distilled water to make a solution. |   |    |
| Add 1 cm depth of <b>FA 6</b> solution.  |   |    |
| To 1 cm depth of <b>FA 6</b> solution in a test-tube, add aqueous sodium hydroxide.                      |   |    |
| Carefully heat the solid FA 6 in the test-tube provided.   |   |    |
| Note: <b>two</b> gases are released.   |   |    |
|  |   | [( |
| (ii) From the results of the tests in  | (i), identify the cation present in FA 6. |    |
| Cation present in FA 6 is  |   | 1  |

| I   |  |
|-----|--|
| II  |  |
| III |  |
| IV  |  |
| V   |  |
| VI  |  |

(iii) Suggest and use another reagent to confirm the cation present in FA 6.

[Lead(II) ions can be distinguished from aluminium ions by the insolubility of lead(II) chloride.]

## 2 Reactions of anions

| ion   | reaction   |
|---|--|
| carbonate,  | CO <sub>2</sub> liberated by dilute acids  |
| CO <sub>3</sub> <sup>2-</sup>                     |  |
| chromate(VI), CrO <sub>4</sub> <sup>2-</sup> (aq) | yellow solution turns orange with H <sup>+</sup> (aq);<br>gives yellow ppt. with Ba <sup>2+</sup> (aq);<br>gives bright yellow ppt. with Pb <sup>2+</sup> (aq) |
| chloride,   | gives white ppt. with Ag <sup>+</sup> (aq) (soluble in NH <sub>3</sub> (aq));  |
| Cl <sup>-</sup> (aq)                              | gives white ppt. with Pb <sup>2+</sup> (aq)  |
| bromide,  | gives cream ppt. with Ag <sup>+</sup> (aq) (partially soluble in NH <sub>3</sub> (aq));  |
| Br <sup>-</sup> (aq)                              | gives white ppt. with Pb <sup>2+</sup> (aq)  |
| iodide,   | gives yellow ppt. with Ag <sup>+</sup> (aq) (insoluble in NH <sub>3</sub> (aq));   |
| I <sup>-</sup> (aq)                               | gives yellow ppt. with Pb <sup>2+</sup> (aq)   |
| nitrate,  | $\mathrm{NH_3}$ liberated on heating with $\mathrm{OH^-}(\mathrm{aq})$ and $\mathrm{A}\mathit{l}$ foil   |
| NO <sub>3</sub> <sup>-</sup> (aq)                 |  |
| nitrite,  | NH <sub>3</sub> liberated on heating with OH <sup>-</sup> (aq) and Al foil;  |
| NO <sub>2</sub> (aq)                              | NO liberated by dilute acids (colourless NO → (pale) brown NO <sub>2</sub> in air)   |
| sulfate,  | gives white ppt. with Ba <sup>2+</sup> (aq) or with Pb <sup>2+</sup> (aq) (insoluble in excess dilute  |
| SO <sub>4</sub> <sup>2-</sup> (aq)                | strong acids)  |
| sulfite,  | SO <sub>2</sub> liberated with dilute acids;   |
| SO <sub>3</sub> <sup>2-</sup> (aq)                | gives white ppt. with Ba <sup>2+</sup> (aq) (soluble in excess dilute strong acids)  |

# 3 Tests for gases

| gas                             | test and test result  |
|---------------------------------|---|
| ammonia, NH <sub>3</sub>        | turns damp red litmus paper blue  |
| carbon dioxide, CO <sub>2</sub> | gives a white ppt. with limewater (ppt. dissolves with excess CO <sub>2</sub> ) |
| chlorine, Cl <sub>2</sub>       | bleaches damp litmus paper  |
| hydrogen, H <sub>2</sub>        | "pops" with a lighted splint  |
| oxygen, O <sub>2</sub>          | relights a glowing splint   |
| sulfur dioxide, SO <sub>2</sub> | turns acidified aqueous potassium dichromate(VI) from orange to green           |
