Mathematics

MM03

Unit Mechanics 3

Wednesday 3 June 2015 9.00 am to 10.30 am

For this paper you must have:

- the blue AQA booklet of formulae and statistical tables.
- You may use a graphics calculator.

Time allowed

- 1 hour 30 minutes

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- Write the question part reference (eg (a), (b)(i) etc) in the left-hand margin.
- You must answer each question in the space provided for that question. If you require extra space, use an AQA supplementary answer book; do **not** use the space provided for a different question.
- Do not write outside the box around each page.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.
- The **final** answer to questions requiring the use of calculators should be given to three significant figures, unless stated otherwise.
- Take $g = 9.8 \text{ m s}^{-2}$, unless stated otherwise.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 75.

Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

2 A projectile is launched from a point O on top of a cliff with initial velocity $u \text{ m s}^{-1}$ at an angle of elevation α and moves in a vertical plane. During the motion, the position vector of the projectile relative to the point O is $(x\mathbf{i} + y\mathbf{j})$ metres where \mathbf{i} and \mathbf{j} are horizontal and vertical unit vectors respectively.

(a) Show that, during the motion, the equation of the trajectory of the projectile is given by

$$y = x \tan \alpha - \frac{4.9x^2}{u^2 \cos^2 \alpha}$$

[5 marks]

(b) When $u = 21$ and $\alpha = 55^\circ$, the projectile hits a small buoy B . The buoy is at a distance s metres vertically below O and at a distance s metres horizontally from O , as shown in the diagram.

(i) Find the value of s .

[3 marks]

(ii) Find the acute angle between the velocity of the projectile and the horizontal just before the projectile hits B , giving your answer to the nearest degree.

[5 marks]

QUESTION
PART
REFERENCE

Answer space for question 2

A large rectangular area with horizontal dotted lines for writing the answer to question 2.

QUESTION
PART
REFERENCE

Answer space for question 2

Area with horizontal dotted lines for writing the answer to question 2.

Turn over ►

- 5 Two smooth spheres, A and B , have equal radii and masses 2 kg and 1 kg respectively. The spheres move on a smooth horizontal surface and collide. As they collide, A has velocity 4 m s^{-1} in a direction inclined at an angle α to the line of centres, and B has velocity 2.6 m s^{-1} in a direction inclined at an angle β to the line of centres, as shown in the diagram.

The coefficient of restitution between A and B is $\frac{4}{7}$.

Given that $\sin \alpha = \frac{4}{5}$ and $\sin \beta = \frac{12}{13}$, find the speeds of A and B immediately after the collision.

[11 marks]
