RECOGNISING ACHIEVEMENT

ADVANCED SUBSIDIARY GCE UNIT **4722/01**

MATHEMATICS

Core Mathematics 2

THURSDAY 7 JUNE 2007 Morning

Time: 1 hour 30 minutes

Additional Materials: Answer Booklet (8 pages)
List of Formulae (MF1)

INSTRUCTIONS TO CANDIDATES

- Write your name, centre number and candidate number in the spaces provided on the answer booklet.
- Answer **all** the questions.
- Give non-exact numerical answers correct to 3 significant figures unless a different degree of accuracy is specified in the question or is clearly appropriate.
- You are permitted to use a graphical calculator in this paper.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [ ] at the end of each question or part question.
- The total number of marks for this paper is 72.

ADVICE TO CANDIDATES

- Read each question carefully and make sure you know what you have to do before starting your answer.
- **You are reminded of the need for clear presentation in your answers.**

This document consists of **4** printed pages.

2

1   A geometric progression u_1, u_2, u_3, ... is defined by

$$u_1 = 15 \qquad \text{and} \qquad u_{n+1} = 0.8u_n \text{ for } n \geqslant 1.$$

    (i) Write down the values of u_2, u_3 and u_4.   [2]

    (ii) Find $\displaystyle\sum_{n=1}^{20} u_n$.   [3]

2   Expand $\left(x + \dfrac{2}{x}\right)^4$ completely, simplifying the terms.   [5]

3   Use logarithms to solve the equation $3^{2x+1} = 5^{200}$, giving the value of x correct to 3 significant figures.
[5]

4

The diagram shows the curve $y = \sqrt{4x + 1}$.

    (i) Use the trapezium rule, with strips of width 0.5, to find an approximate value for the area of the region bounded by the curve $y = \sqrt{4x + 1}$, the x-axis, and the lines $x = 1$ and $x = 3$. Give your answer correct to 3 significant figures.   [4]

    (ii) State with a reason whether this approximation is an under-estimate or an over-estimate.   [2]

5   **(i)** Show that the equation

$$3\cos^2\theta = \sin\theta + 1$$

can be expressed in the form

$$3\sin^2\theta + \sin\theta - 2 = 0.$$ [2]

    (ii) Hence solve the equation

$$3\cos^2\theta = \sin\theta + 1,$$

giving all values of θ between $0°$ and $360°$.   [5]

6   **(a)**   **(i)** Find $\int x(x^2 - 4)\,dx$.   [3]
   (ii) Hence evaluate $\int_1^6 x(x^2 - 4)\,dx$.   [2]

   (b) Find $\int \dfrac{6}{x^3}\,dx$.   [3]

7   **(a)** In an arithmetic progression, the first term is 12 and the sum of the first 70 terms is 12 915. Find the common difference.   [4]

   (b) In a geometric progression, the second term is −4 and the sum to infinity is 9. Find the common ratio.   [7]

8

The diagram shows a triangle ABC, where angle BAC is 0.9 radians. BAD is a sector of the circle with centre A and radius AB.

   (i) The area of the sector BAD is $16.2\,\text{cm}^2$. Show that the length of AB is 6 cm.   [2]

   (ii) The area of triangle ABC is twice the area of sector BAD. Find the length of AC.   [3]

   (iii) Find the perimeter of the region BCD.   [6]

9   The polynomial $f(x)$ is given by

$$f(x) = x^3 + 6x^2 + x - 4.$$

   (i) **(a)** Show that $(x + 1)$ is a factor of $f(x)$.   [1]

   (b) Hence find the exact roots of the equation $f(x) = 0$.   [6]

   (ii) **(a)** Show that the equation

$$2\log_2(x + 3) + \log_2 x - \log_2(4x + 2) = 1$$

   can be written in the form $f(x) = 0$.   [5]

   (b) Explain why the equation

$$2\log_2(x + 3) + \log_2 x - \log_2(4x + 2) = 1$$

   has only one real root and state the exact value of this root.   [2]
