Notice to Candidate. The work you submit for assessment must be your own. If you copy from someone else or allow another candidate to copy from you, or if you cheat in any other way, you may be disqualified.

Candidate Declaration. I have read and understood the Notice to Candidate and can confirm that I have produced the attached work without assistance other than that which is acceptable under the scheme of assessment.

Chemistry CHM3T/Q13/test

Unit 3T AS Investigative Skills Assignment

Written Test

For submission by 15 May 2013

For this paper you must have:	**Time allowed**
• the Periodic Table/Data Sheet provided at the end of this paper • your Task Sheet and your Candidate Results Sheet • a ruler with millimetre measurements • a calculator.	• 1 hour
Instructions	**Information**
• Use black ink or black ball-point pen. • Fill in the boxes at the top of this page. • Answer **all** questions. • You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages. • Do all rough work in this book. Cross through any work you do not want to be marked.	• The marks for questions are shown in brackets. • The maximum mark for this paper is 30. • You are expected to use a calculator, where appropriate. • You will be marked on your ability to: – organise information clearly – use scientific terminology accurately.

Details of additional assistance (if any). Did the candidate receive any help or information in the production of this work? If you answer yes give the details below or on a separate page.

Yes ☐ No ☐

Teacher Declaration:
I confirm that the candidate's work was conducted under the conditions laid out by the specification. I have authenticated the candidate's work and am satisfied that to the best of my knowledge the work produced is solely that of the candidate.

Signature of teacher ..... Date .....

Section A

These questions are about the task, to investigate how changes in the concentration of sodium thiosulfate solution affect its rate of reaction with dilute hydrochloric acid.

You should use your Task Sheet and your Candidate Results Sheet to answer these questions.

Answer **all** questions in the spaces provided.

1 Complete **Table 1**. You should transfer from your Candidate Results Sheet the time taken in seconds (t) for the **X** to disappear from view in each of the five experiments. You should also calculate and record a value for $\frac{1000}{t}$ for each of the five concentrations of sodium thiosulfate.

Record each value of $\frac{1000}{t}$ to an appropriate precision.

Table 1

Concentration of $Na_2S_2O_3(aq)$ / mol dm^{-3}	0.04	0.08	0.12	0.16	0.20
t / s					
$\frac{1000}{t}$					

(3 marks)

2 Plot a graph of $\frac{1000}{t}$ (y-axis) against concentration of $Na_2S_2O_3$ on the grid opposite.

(4 marks)

3 Draw a line of best fit on your graph. *(2 marks)*

4 Use your graph to complete **Table 2**.

Table 2

Concentration of $Na_2S_2O_3(aq)$ / mol dm^{-3}	$\frac{1000}{t}$
0.05	
0.10	

(2 marks)

Do not write outside the box

5 Define the term *rate of reaction*.
Explain why it is possible to use the formula $\frac{1000}{t}$ as a measure of the rate of this reaction.

.....

.....

.....

.....

.....

.....

(2 marks)

6 Collision theory is used to explain why, at a constant temperature, the rate of this reaction doubles when the concentration of sodium thiosulfate is doubled and the concentration of hydrochloric acid is kept constant.

Use the data from **Table 2** in Question **4** to state whether or not your results are good enough to support this theory. Use the collision theory, as appropriate, to explain your conclusion.

.....

.....

.....

.....

.....

.....

.....

.....

(2 marks)

7 Predict which one of the five experiments in the Task leads to the least reliable rate. Give **one** reason for your answer.

.....

.....

.....

.....

.....

.....

(2 marks)

8 The error in using a 50 cm^3 measuring cylinder is ± 1.0 cm^3.

Calculate the maximum percentage error in using this apparatus when measuring 50 cm^3 of solution.

.....

.....

(1 mark)

9 Use information from the equation and your knowledge of the experiment to deduce **two** reasons why the hazard associated with the formation of sulfur dioxide in this investigation might be considered to be low.

$$Na_2S_2O_3(aq) + 2HCl(aq) \longrightarrow 2NaCl(aq) + S(s) + SO_2(aq) + H_2O(l)$$

Reason 1 .....

.....

.....

Reason 2 .....

.....

.....

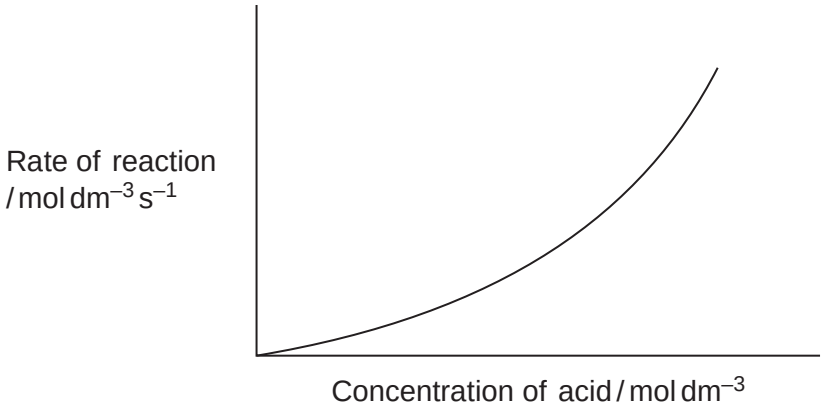
20

Section B

Answer **all** questions in the spaces provided.

The questions in this section concern the rates of some reactions of Group 2 metals.

10 In an investigation of the rate of reaction between hydrochloric acid and pure magnesium, a student obtained the following curve.



The reaction of magnesium with dilute hydrochloric acid is exothermic.

Use your understanding of collision theory to explain why the student did **not** obtain a straight line.

.....

.....

.....

.....

.....

.....

.....

.....

.....

(3 marks)

Do not write outside the box

11 The magnesium used in a laboratory experiment was supplied as a ribbon. The ribbon was stored in an open plastic bag exposed to the air.

Explain why it is important to clean the surface of this magnesium ribbon when investigating the rate of its reaction with hydrochloric acid.

.....

.....

.....

.....

(2 marks)

12 Magnesium ribbon reacts with hot water. Heated magnesium ribbon reacts with steam. State **two** differences between these reactions.

Difference 1 .....

.....

Difference 2 .....

.....

(2 marks)

13 Pure magnesium reacts completely with an excess of dilute sulfuric acid.
The reaction of pure calcium with an excess of dilute sulfuric acid is very rapid initially.
This reaction slows down and stops before all of the calcium has reacted.

Use your knowledge of the solubilities of Group 2 sulfates to explain why these reactions of magnesium and calcium with dilute sulfuric acid are so different.
